

Read Well Assessment App

Business Requirements Document · Prepared September 22, 2026

1. Document Overview

1.1 Purpose

This Business Requirements Document (BRD) defines the business needs, functional scope, and expected outcomes for the **Read Well Assessment App**, a reading-assessment platform for schools. It serves as the foundation for design, development, and stakeholder sign-off.

1.2 Background

Schools need a consistent, reliable way to assess student reading ability by grade level, identify specific areas of difficulty, and act on those findings through a structured reading intervention program. Today this process is likely manual, inconsistent across classrooms, and slow to translate into actionable next steps for teachers, reading specialists, and administrators.

1.3 Problem Statement

Without a standardized digital assessment tool, schools struggle to:

- Administer reading assessments matched to each student's grade level
- Quickly identify each student's specific reading difficulties (e.g., phonics, fluency, comprehension)
- Turn assessment results into program-aligned recommendations
- Aggregate results across a school to inform instructional planning and resource allocation

2. Project Scope

2.1 In Scope

- Digital reading assessments organized by grade level, starting with Grade 1
- Automatic matching of each student to the assessment appropriate for their grade
- Capture and scoring of student assessment results
- Automated, per-student report generation identifying areas of reading difficulty
- Program-aligned recommendations attached to each student report
- Automated, school-wide summary report aggregating results across all students
- Branded user interface using the program's color palette

2.2 Out of Scope (initial release)

- Assessments for grade levels beyond those explicitly defined by the program (future phase)
- Direct integration with third-party Student Information Systems (SIS), unless confirmed as a requirement
- Parent/guardian-facing reporting (unless confirmed as a requirement)

- Delivery of the intervention program itself (the app assesses and recommends; it does not deliver instruction)

3. Business Objectives

#	Objective	Success Metric
1	Standardize reading assessment across grade levels	100% of assessed students receive a grade-matched assessment
2	Identify individual reading difficulties accurately	Every completed assessment produces a report flagging specific skill gaps
3	Connect assessment results to the reading program	Every student report includes recommendations tied to program content
4	Give administrators a school-wide view	A school-level report is generated automatically after each assessment cycle
5	Reduce time from assessment to actionable insights	Reports available immediately (or same-day) after assessment completion

4. Stakeholders & User Roles

Role	Description	Key Needs
Student	Takes the reading assessment	A clear, grade-appropriate assessment experience
Teacher	Administers assessments, reviews reports	Fast access to per-student results and recommendations
Reading Specialist	Uses reports to plan interventions	Detailed breakdown of difficulty areas mapped to the program
School Administrator	Oversees reading outcomes school-wide	School-level summary report for planning and resourcing
District Staff	Reviews outcomes across schools	Aggregated, comparable reporting (future consideration)
Program Owner	Owns the app and reading program	Assessments and recommendations stay aligned to program content

5. Assessment & Grading Requirements

5.1 Grade-Level Matching

- Each student is assigned to an assessment that matches their enrolled grade (e.g., Grade 1 students receive the Grade 1 reading assessment)
- The system must support grade-specific assessment content, scoring rubrics, and difficulty benchmarks
- Grade 1 is the initial supported grade level; the framework should be extensible to additional grades in future phases

5.2 Assessment Delivery

- Assessments are administered digitally through the app
- The system captures raw responses and scores them against the grade-level rubric
- Results are stored against the student's profile for report generation

5.3 Skill Area Coverage

Assessment results should be broken down by reading skill area (exact taxonomy to be confirmed with the reading program), for example:

- Phonemic awareness / phonics
- Fluency
- Vocabulary
- Comprehension
- Sight word recognition

6. Reporting Requirements

6.1 Individual Student Report

Generated automatically after each student completes an assessment. Must include:

- Student name, grade, and assessment date
- Overall performance summary
- Breakdown of results by skill area, highlighting specific areas of difficulty
- Program-aligned recommendations: next steps and activities drawn from the reading program that target the student's identified weak areas
- Exportable/printable format (e.g., PDF) for sharing with teachers and, where appropriate, parents

6.2 School-Wide Report

Generated automatically after an assessment cycle. Must include:

- Aggregate performance across all assessed students, by grade
- Distribution of common difficulty areas school-wide (e.g., % of students struggling with fluency)
- Trends to support instructional planning and resource allocation
- Exportable/printable format for administrators

6.3 Recommendation Logic

- Recommendations must be generated by mapping each identified difficulty area to corresponding content/strategies in the reading program (rules to be defined with the program team)
- The mapping between skill gaps and recommended program content should be configurable/maintainable as the program evolves

7. Branding & UI Requirements

7.1 Color Palette

The application UI must use the following brand palette:

- **Sage Green** — primary brand color
- **Terracotta** — secondary/accent color (*to be confirmed — see note below*)
- **Cream** — background/neutral color

Note: The accent color was submitted as “seraquota,” which does not match a standard color name. It has been interpreted here as **Terracotta** as a placeholder. Exact hex/RGB values for all three colors should be confirmed and documented before visual design begins.

7.2 UI Requirements

- Consistent application of the palette across student-facing assessment screens, teacher/admin dashboards, and generated reports
- Accessible color contrast (WCAG AA minimum) for all text and interactive elements
- Clean, low-distraction interface appropriate for young students (Grade 1 and up) taking assessments

8. Non-Functional Requirements

Category	Requirement
Usability	Simple, age-appropriate interface for Grade 1 students; minimal reliance on independent reading of instructions
Performance	Assessment and report generation should complete without noticeable delay for the end user
Security & Privacy	Student data (names, scores, grade, difficulty areas) must be protected in line with applicable student data privacy laws
Accessibility	UI must meet WCAG AA color contrast and be usable with common assistive technologies
Reliability	Assessment sessions and results must not be lost due to interruptions (e.g., autosave/recovery)
Scalability	Must support concurrent use by multiple classrooms/students during school assessment windows

9. Assumptions & Constraints

Assumptions

- Grade 1 is the first assessment level to be built; other grades will follow in later phases
- A defined reading program (curriculum/intervention content) already exists and can supply the recommendation content the reports will reference
- Schools have basic device and internet access needed to administer digital assessments

Constraints

- Recommendations are only as good as the mapping between skill gaps and program content, which must be defined and maintained by the program team
- Exact assessment content, rubrics, and scoring criteria for Grade 1 are owned by the reading program and must be supplied to the app team

10. Open Questions

- 1 What are the exact hex/RGB values for the brand colors (sage green, the accent color, and cream)?
- 2 What is the correct name/value for the second accent color submitted as “seraquota”?
- 3 Which grade levels beyond Grade 1 are planned, and on what timeline?
- 4 What is the official skill-area taxonomy used by the reading program (for scoring and recommendations)?
- 5 What is the exact logic/mapping for turning a skill gap into a specific recommendation?
- 6 Should parents/guardians have access to student reports, and if so, in what form?
- 7 Does the app need to integrate with an existing Student Information System (SIS)?
- 8 Who are the named stakeholders/approvers for sign-off on this BRD?
