

Read Well Assessment App

Product Requirements Document · Prepared September 22, 2026

1. Overview

1.1 Summary

The Read Well Assessment App lets schools administer grade-matched reading assessments, starting with Grade 1, and automatically turns results into two things: an individual report for each student showing where they struggled and what to do about it, and a rolled-up report showing the school where its reading gaps are as a whole.

1.2 Target Users

- Teachers who administer assessments and act on individual student reports
- Reading specialists/interventionists who plan support using the difficulty breakdown
- School administrators who use the school-wide report for planning and resourcing
- Students (Grade 1 and up) who take the assessment itself

1.3 Goals (from the BRD)

- Every student is assessed with content matched to their grade level
- Every student gets a report identifying specific difficulty areas with program-aligned recommendations
- Every school gets an aggregate report after each assessment cycle
- The product reflects the brand palette (sage green, cream, and a to-be-confirmed accent) throughout

2. User Personas

Persona	Who They Are	Primary Goal in the App
Ms. Rivera — Grade 1 Teacher	Administers the reading assessment to the class	Quickly see which students are struggling and why, right after the assessment
Mr. Okafor — Reading Specialist	Works with flagged students across grades	Get a clear, program-aligned recommendation per student to plan intervention
Dr. Chen — Principal	Oversees reading outcomes school-wide	See a school-level view of reading performance to guide staffing and resourcing
Amara — Grade 1 Student	Takes the assessment	A simple, low-stress assessment experience she can complete largely on her own

3. Core User Stories & Flows

3.1 Student takes an assessment

- 1 Teacher starts (or student logs into) the Grade 1 assessment session
- 2 App presents grade-matched assessment items in a simple, low-text-dependent interface

- 3 Student completes the assessment; progress autosaves in case of interruption
- 4 On completion, results are scored and stored against the student's profile

Acceptance criteria: A Grade 1 student is only ever shown Grade 1 assessment content; an interrupted session can be resumed without losing prior answers; the student sees a simple “you're done” confirmation, not raw scores.

3.2 Teacher reviews a student report

- 1 Teacher opens the student's profile after assessment completion
- 2 App has already generated the student report (no manual step required)
- 3 Teacher views overall performance, skill-area breakdown, and recommendations
- 4 Teacher can export/print the report to share or file

Acceptance criteria: The report is available immediately (or same-day) after the assessment is scored; every report includes at least one recommendation per flagged difficulty area; the report is exportable as a PDF.

3.3 Administrator views the school report

- 1 Administrator opens the school dashboard after an assessment cycle
- 2 App has already generated the aggregate school report
- 3 Administrator views performance by grade and the distribution of common difficulty areas
- 4 Administrator can export/print the school report

Acceptance criteria: The school report reflects all completed assessments in the current cycle; it updates as new assessments are completed; it is exportable as a PDF.

4. Feature Requirements

4.1 Grade-Matched Assessment Delivery

- The system assigns each student the assessment for their enrolled grade automatically; no manual selection by the teacher required
- Grade 1 assessment content, items, and scoring rubric are configurable by the program team without a code change
- **Acceptance criteria:** Attempting to assign a Grade 2 assessment to a Grade 1 student is blocked or requires explicit override with a warning

4.2 Assessment Session

- Autosave of in-progress responses
- Resumable sessions after interruption (device issue, network loss)
- Simple navigation suited to early readers (minimal reliance on reading instructions independently)
- **Acceptance criteria:** A session interrupted mid-assessment can be resumed from the last saved question

4.3 Individual Student Report

- Auto-generated immediately after scoring, no manual trigger
- Shows overall performance plus a breakdown by skill area (e.g., phonics, fluency, comprehension)
- Flags specific areas of difficulty
- Attaches program-aligned recommendations per flagged area, pulled from a configurable mapping (difficulty area → recommended program content)
- Exportable as PDF
- **Acceptance criteria:** Every flagged difficulty area has at least one associated recommendation in the exported report

4.4 School-Wide Report

- Auto-generated / auto-updated as assessments in a cycle are completed
- Aggregates performance by grade
- Shows distribution of common difficulty areas across the school
- Exportable as PDF
- **Acceptance criteria:** The report reflects 100% of completed assessments in the selected cycle at time of generation

4.5 Roles & Access

- Teacher: can administer assessments and view reports for their own students
- Reading Specialist: can view reports for students assigned to them
- Administrator: can view all student reports and the school-wide report

- **Acceptance criteria:** A teacher cannot view another teacher's students' reports unless granted administrator access

5. UX/UI Requirements

5.1 Visual Design

- Primary color: Sage Green
- Background/neutral: Cream
- Accent color: placeholder “Terracotta” pending confirmation of the submitted name “seraquota”
- Consistent application across the student assessment screens, teacher/admin dashboards, and generated PDF reports

5.2 Usability

- Student-facing assessment UI designed for early readers: large touch targets, minimal text, icon-supported navigation
- Teacher/admin dashboards prioritize scanability: at-a-glance flags for students needing attention
- Reports are readable as standalone printed documents, not just on-screen

5.3 Accessibility

- WCAG AA color contrast minimum across all screens and exported reports
- Keyboard and screen-reader accessible teacher/admin interfaces
- Legible font sizing appropriate for young students on the assessment screens

6. Out of Scope (This Release)

- Assessments for grades other than Grade 1
- Parent/guardian-facing report access or notifications
- Direct Student Information System (SIS) integration
- Delivery of the intervention/instructional content itself (the app assesses and recommends only)
- District-level (multi-school) rollup reporting
- Native mobile apps (web-based only for this release)

7. Success Metrics / KPIs

Metric	Target
% of assessed students with a grade-matched assessment	100%
% of completed assessments with a report generated same-day	100%
% of student reports with at least one recommendation per flagged difficulty	100%
Time from assessment completion to report availability	Near-instant (target: under a few minutes)
Teacher-reported usefulness of recommendations (survey)	≥ 80% rate as helpful
School reports generated per assessment cycle	1 per cycle, automatically

8. Release Phasing

Phase	Scope
Phase 1 (MVP)	Grade 1 assessment, individual student reports with recommendations, school-wide report, core roles (teacher, ac
Phase 2	Additional grade levels, reading specialist role and workflows, refined recommendation mapping
Phase 3	Parent/guardian access, SIS integration, district-level rollup reporting (pending confirmation these are needed)

9. Open Questions

- 1 What is the confirmed accent brand color (vs. the placeholder “Terracotta”)?
- 2 What is the official skill-area taxonomy and recommendation mapping from the reading program?
- 3 Should teachers be able to override/reassign a student's grade-level assessment, and under what conditions?
- 4 Is same-device, in-classroom assessment the primary delivery mode, or should students be able to complete it remotely?
- 5 Do reading specialists need their own dedicated workflow in Phase 1, or is that Phase 2?
- 6 What level of detail should the school-wide report show — by classroom, by grade only, or both?
